## **Mount Vernon Aerial Lift Train the Trainer**

Marysville Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are given in-depth instruction about aerial lift equipment. The program is provided on an open enrollment basis and delivered at selected training places. Prior to certification, trainers are assessed and graded based on their knowledge and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the top training provider in the industry, we offer top notch hands-on training. We offer lots of opportunities to practice the concepts and techniques which are learned inside the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional methods and machine theory, field and classroom communication skills, and ability to successfully train and assess operators. Trainers would gain knowledge of what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts in a classroom and/or field condition. Knowledge needs a training component to be effective in workplace environments. There are three factors of machinery operation which the trainer should learn how to convey to operators: what to perform; how to do it; and the reason why it should be carried out.

In the program, trainers would be given the latest, detailed reference material to better help them convey the information to machine operators. The guidebooks utilized, include detailed information regarding all aspects of industrial mobile machine operator training. Included in the package are training aids which provide a visual reference to be able to improve the learning experience. The equipment-specific training products include important materials for both the trainer and the operator: overhead transparencies, videos/DVD's, safety message posters, equipment models; stability pyramids and digital training aids.
